

Capabilities Dashboard Metrics Report

Muhirwa Salomon

August 2024

This report provides an analysis of key metrics related to capabilities displayed in the NACB (National Association of Cannabis Businesses) dashboard. The metrics presented are vital for assessing capability engagement, market performance, sales volume, and overall effectiveness of NACB's strategies. These insights are crucial for NACB staff to make informed decisions that enhance the performance and alignment of their initiatives with organizational goals.

1 Introduction

Effective decision-making within organizations such as the National Association of Cannabis Businesses (NACB) relies heavily on data-driven insights. This report analyzes key metrics from the NACB Capabilities Dashboard, focusing on total capabilities, market performance, sales volume, and engagement. These insights help prioritize initiatives and align strategies with organizational goals [7], [3].

2 Metrics Overview

2.1 Total Capabilities

The total capabilities metric provides an overview of all active and closed capabilities within NACB. Monitoring this metric allows for assessing the overall workload and strategic alignment of opportunities [6]. Currently, there are 376 total capabilities, forming a substantial dataset for analysis.

2.2 Active Capabilities

Active capabilities reflect ongoing initiatives that require immediate attention and resources. NACB currently tracks 132 active capabilities, providing insights into resource allocation and operational focus [8].

2.3 Closed Capabilities

Closed capabilities represent completed initiatives that can be analyzed for lessons learned and future strategic planning. The dashboard shows 117 closed

capabilities, indicating areas where NACB has successfully completed its initiatives [9].

2.4 Pending Capabilities

Pending capabilities are those under consideration or awaiting action. This metric is crucial for prioritizing tasks and making strategic decisions. The dashboard shows 127 pending capabilities, indicating areas that require follow-up or additional resources [5].

2.5 Capabilities by Market Performance

Categorizing capabilities by market performance (high, low) is crucial for understanding their influence on the industry. With 53.846% high-performance capabilities, NACB can prioritize initiatives that maximize market influence [1].

2.6 Capabilities by Sales Volume

The sales volume metric allows NACB to identify high-impact capabilities by their sales results. With a balanced distribution across high, medium, and low sales volumes, this provides insights into overall market trends [2].

2.7 Capabilities by Brand Positioning

Brand positioning is essential for maintaining competitive advantage. The current distribution of capabilities by brand positioning highlights 40.96% as high-positioning, reflecting a strong brand presence [4].

3 Conclusion

The metrics outlined in this report provide a comprehensive understanding of NACB's capability landscape. Leveraging these insights will enable NACB to optimize its strategy, improve engagement, manage risks, and maximize market impact. The integration of these metrics into NACB's operational planning is essential for enhancing organizational effectiveness and aligning with strategic goals.
