

NACB Dashboard Metrics Report

NACB Staff Analysis

August 20, 2024

1 Introduction

This report presents an analysis of key metrics displayed in the NACB (National Association of Cannabis Businesses) dashboard. The metrics are essential for monitoring event engagement, understanding category distribution, and optimizing event planning and communication strategies. The insights derived from these metrics will aid NACB staff in making data-driven decisions to enhance their outreach and organizational alignment [1] [2].

2 Metrics Overview

2.1 Total Events

Importance: The total number of events provides an overview of all event activity across the selected categories [5].

Usage: NACB staff can use this metric to track the overall volume of events, ensuring that they are adequately represented and managed. The total event count in this dashboard is 500, indicating a robust dataset for analysis.

2.2 Total Events by Category

Importance: This metric breaks down the total events by category, such as Technology, Business & Finance, Entertainment, Science, Health, Politics, and Sports [3].

Usage: By understanding the distribution of events across categories, NACB staff can focus resources on areas that either need more attention or are of significant interest to their audience. For instance, Technology and Business & Finance each represent around 16% of total events, suggesting strong engagement in these areas.

2.3 Total Events by Entry Type

Importance: This metric splits the total events by entry type, distinguishing between manual and automatic entries [1].

Usage: Knowing the proportion of manual versus automatic entries (48.4% manual and 51.6% auto) helps NACB evaluate the efficiency of their data entry processes and identify opportunities for automation.

2.4 Top Rated Events

Importance: Highlights the events with the highest ratings, based on user feedback or internal evaluation criteria [4].

Usage: NACB can analyze these top-rated events to understand what factors contributed to their success, which can inform the planning of future events.

2.5 Top Liked Events

Importance: This metric showcases the events that received the most likes, reflecting high user approval and engagement [2].

Usage: By identifying the most liked events, NACB staff can tailor future content to align with the preferences and interests of their audience.

2.6 Top Viewed Events

Importance: Displays the events with the highest number of views, indicating topics or themes that attracted significant interest [5].

Usage: Understanding which events generated the most views can help NACB optimize their promotional efforts and content distribution.

2.7 Top Saved Events

Importance: Lists the events that were saved the most by users, suggesting perceived value or importance [3].

Usage: This metric allows NACB to prioritize content that users deem valuable, enhancing their overall content strategy.

3 Calculated Fields Explanation

3.1 Percentage Distribution for Category and Entry Type

The dashboard uses percentage calculations to represent the distribution of events by category and entry type. This visual representation aids in quickly understanding the proportionality of event categories and the balance between manual and automatic entries [1].

3.2 Top Events Metrics

The metrics for "Top Rated," "Top Liked," "Top Viewed," and "Top Saved" events are calculated based on user interactions, feedback, and internal scoring. These calculated fields provide actionable insights into user preferences, allowing NACB staff to adjust their strategies accordingly [2].

4 Conclusion

The metrics detailed in this report are vital for NACB to enhance event management, optimize engagement, and ensure alignment with organizational goals [4]. By integrating these metrics into their strategic planning, NACB staff can make informed decisions that will maximize the impact of their events and outreach efforts [3].
